# Almost 300 Solved MCQs of CS201

By

Default constructor takes \_\_\_\_\_.

one parameter
two parameters
no parameters
character type parameter

All the preprocessors directives start with \_\_\_\_\_.

\$ & #

The members of a class declared with the keyword struct are \_\_\_\_\_ by default.

static private protected public

Loops are	Structure
Decision	
Sequential	
Repetition	
None of the given options	

We cannot use \_\_\_\_\_\_ pointer for storing and reading data from it.

NULL

integer double zero

When an object of a class is defined inside another class then,

Destructor of enclosing class will be called first Destructor of inner object will be called first Constructor and Destructor will be called simultaneously None of the given options Consider the following code segment. Which of the following will be called while executing code at line 2? String s1, s2; s1 = s2;

Copy constructor Default constructor Assignment operator Parameterized constructor

We cannot increment \_\_\_\_\_.

pointers arrays references variables

In statement Matrix m2 = m1;

#### Assignment operator is being used

Copy constructor is being used. Statement has syntax error None of the given options

From the following; which on is the correct syntax of an array declaration: array size is 5 and it is of float data type?

float [5] name; name[5] float; float name[5]; None of the given options

If an array has 50 elements, what is allowable range of subscripts?

 $\frac{0-49}{1-49}$ 

 $1 - 49 \\ 0 - 50$ 

1 - 50

http://vujannat.ning.com Best Website To Help VUStudents

A structure is a collection of \_\_\_\_\_under a single name.

values variables data None of the given

If a function has not been declared before its definition, It is a

logical error syntax error run time error None of these

When the if statement consists more than one statement then enclosing these statement in curly braces is,

Not required Good programming Relevant Must

\_\_\_\_\_ allow us to have a memory location and use it as int or char interchangeably

structures union construct None of the given

In Analysis, we try to have a\_\_\_\_\_

Determined the inputs Break up of problem Precise problem statement None of the given

function give the position of the next character to be read from that

file.

tellp() tellg() seekg() seekp()

Pointers store the \_\_\_\_\_

value of a variable memory address characters None of the given

In order to get the right most digit of a number, we divide this number by 10 and take its

Remainder Quotient Divisor None of the given options

\_ Returns true if c is a digit and false otherwise.

int isalpha( int c )
int isalnum( int c )
int isxdigit( int c )
int isdigit( int c )

If int a = 50; then the value of a/= 3; will be,

15 18

16

17

contains functions for manipulations of character data.

ctype.h iostream.h string.h None of the given \_\_\_\_\_\_ Returns true if c is a digit or a letter and false otherwise. int isalpha( int c )

int isalnum( int c ) int isxdigit( int c ) int isdigit( int c )

If int sum = 54; Then the value of the following statement is sum = sum - 3;

52 50 <mark>51</mark>

57

To get the value stored at a memory address, we use the\_\_\_\_\_

referencing operator dereferencing operator simple operator None of the given

In C/C++; by default arguments are passed by \_\_\_\_\_ to a function.

Reference Value Type Data

The string in the array is terminated by a \_\_\_\_\_

zero nil null one

Structures are syntactically defined with the word\_\_\_\_\_.

struc
struct
structure
None of the given

C is widely known as development language of \_\_\_\_\_ operating system.

Linux
Unix
Windows
Mac OS

http://vustudents.ning.com

At the\_\_\_\_\_, we try to break up the problem into functional units

analysis phase design phase Implementation phase None of the given

While developing a program; should we think about the user interface?

Yes No

What will be the result of arithmetic expression 5+25/5\*5?

Why we use "cin"?

To send data to printer To read data from keyboard To display message To display output on the screen

\_\_\_\_\_operator uses the sign ^.

Bit-wise OR Exclusive OR AND Operator NOT operator

C++ is a\_\_\_\_\_ language.

High level Low level Machine Fourth Generation

12 & 8 = (1000) 2 =\_\_\_\_\_. & is used to AND two numbers bit-wise

From the following; which one is used as an assignment operator?

Equal sign '=' Double equal sign '==' Both equal and double equal sign None of the given options

What will be the value of 'a' and 'b' after executing the following statements? int a = 9; int b = a++; cout<<

10,9 9,10 9,9 10,10

These functions seekg() and seekp() requires an argument of type \_\_\_\_\_\_ to let them how many bytes to move forward or backward.

int short long double

A character is stored in the memory in \_\_\_\_\_

byte integer string None of the given

dereferencing operator is represented by \_\_\_\_\_

\* +

> -None of the given

> > transfers the executable code from main memory to hard disk.

Loader Debugger Compiler Linker

When the logical operator OR (||) combine two expressions exp1 and exp2 then the result will be false only,

When both exp1 and exp2 are true When both exp1 and exp2 are false When exp1 is true and exp2 is false When exp1 is false and exp2 is true

suppose we have int y[10]; To access the 4th element of the array we write\_\_\_\_\_

y[4]; y[3]; y[2]; none of given

we have opened a file stream myfile for reading (getting), myfile.tellg () gives us the current get position of the file pointer. It returns a whole number of type\_\_\_\_\_

long int short double

ofstream is used for\_\_\_\_\_

Input file stream Output file stream Input and output file stream All of the given

A structure is a collection of \_\_\_\_\_under a single name.

values variables data None of the given

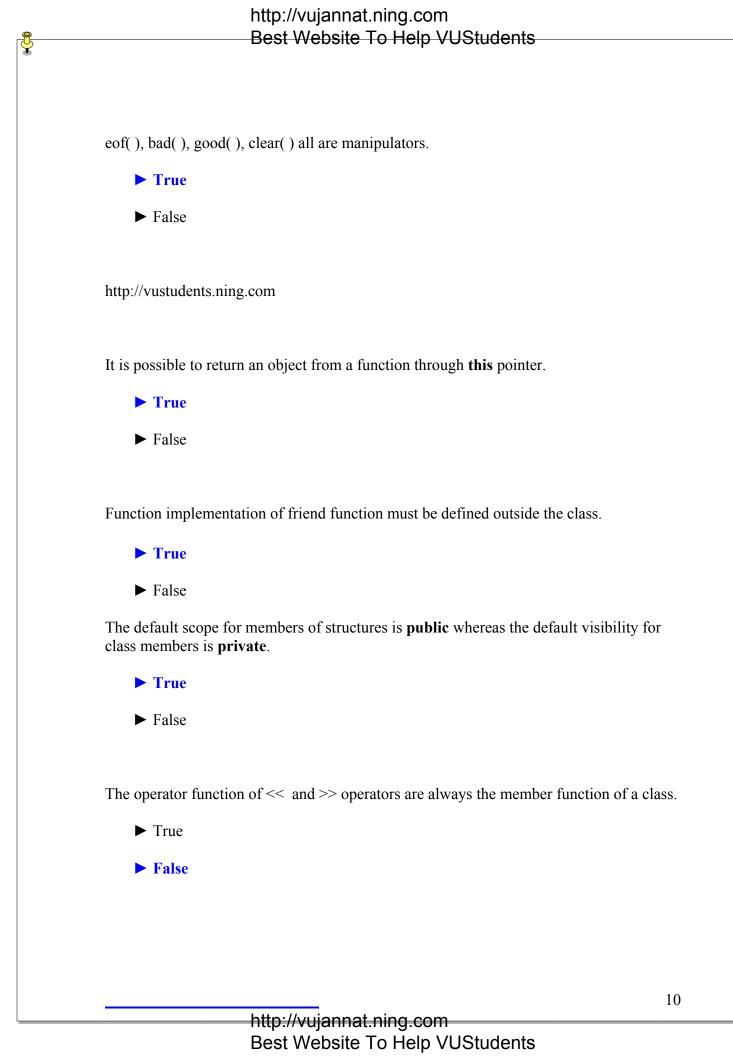

The first character of a variable name must be an alphabet or

- ► Digit
- Special character
- ► Comma

Suppose int multi[5][10]; when we are using \*\*multi, it means,

- ► Single dereferencing
- ► Single referencing
- Double referencing
- Double dereferencing

How many bytes are occupied by declaring following array of characters?

```
char str[] = "programming";
```

▶ 10

▶ 13

What does STL stand for?

- ► Source template library
- **Standard template library**
- ► Stream template library
- ► Standard temporary library

Which of the following array is the most suitable for storing a matrix structure

```
► Single-dimensional array
```

- ► Two-dimensional array
- ► Three-dimensional array
- ► Four-dimensional array

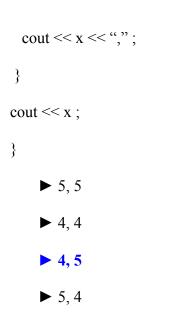

What will be the output of following code segment?

main(){

int x = 5;

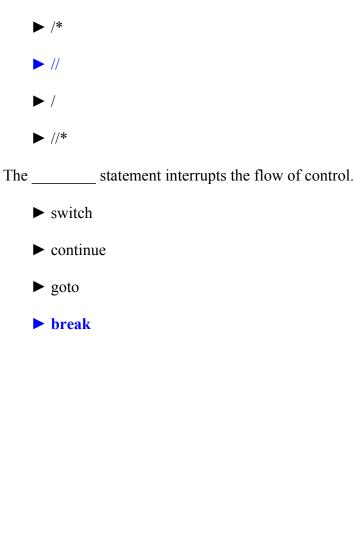

{

```
int x = 4;
```

Y

Single line comments explaining code would be preceded like in the following example.

Which of the following will be the correct function call for function prototype given below?

#### int func (int &);

- ► func(int num);
- ► func(&num);
- func(num);
- ► func(\*num);

If there is a symbol (& sign) used with the variable name followed by data type then it refers to \_\_\_\_\_ and if & is being used with variable name then it refers to \_\_\_\_\_.

- Address of variable, reference variable
- ► Reference variable, value of variable
- Reference variable, address of variable
- ► Address of variable, value of variable

Which of the following operator the compiler overloads for objects by default?

- ► + operator
- operator
- ► = operator
- ► == operator

If overloaded plus operator is implemented as member function then which of the following option will be true for the statement given below?

obj3 = obj1 + obj2 ;

► obj1 will be passed as an argument to + operator whereas obj2 will drive the + operator

► obj1 will drive the + operator whereas obj2 will be passed as an argument to + operator

- ▶ Both objects (obj1, obj2) will be passed as arguments to the + operator
- ► Any of the objects (obj1, obj2) can drive the + operator

The operator function will be implemented as \_\_\_\_\_, if both objects (obj1, obj2) are passed as arguments to - operator in the statement given below.

```
obj3 = obj1 - obj2;
```

- ► friend function
- member function
- non-member function
- ▶ either non-member or friend function

The input/output streams cin and cout are \_\_\_\_\_\_ therefore have \_\_\_\_\_.

- ► Structures, function
- Objects, member functions
- ► Functions, objects
- ► None of the given options

What will be the output of following statement?

## cout << setfill('0') << setw(7) << 128

- ▶ 0000128
- ▶ 0128128
- ▶ 1280000
- ▶ 0012800

http://vustudents.ning.com

The static data members of a class will be \_\_\_\_\_

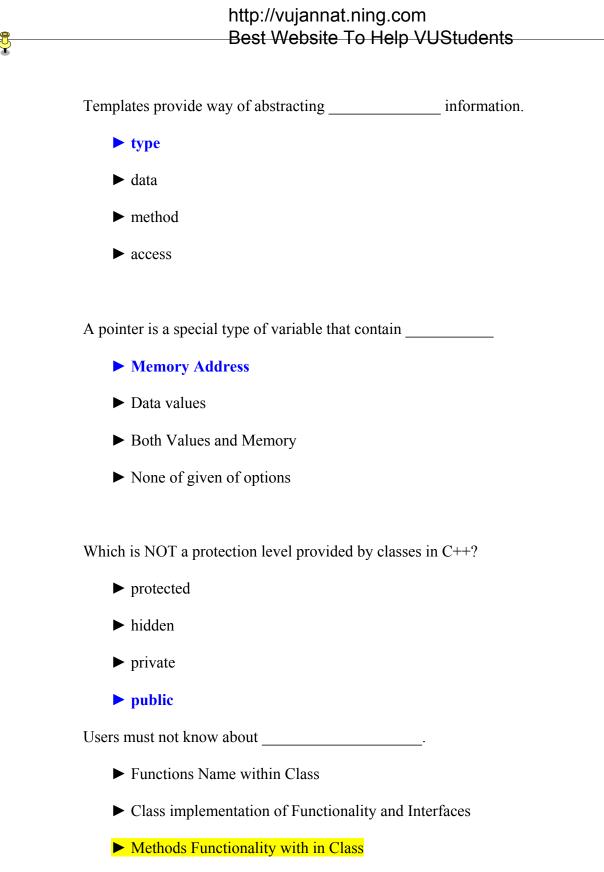

- ► shared by objects
- created for each object

initialized within class

► initialized within main function

Which of the following is used for allocating space for static variables?

- ► Heap
- Static storage area
- ► Free store
- ► Stack

► None of the given options

Assignment operator is used to initialize a newly declared object from existing object

► False

The operator function for << (stream insertion) >> and stream extraction must be

- Member function of class
- Non-member function of class
- ► Both member and non-member function
- ► None of the given options

http://vustudents.ning.com

A template function must have

One or more than one arguments

- ► Only one argument
- ► Zero arguments
- ► None of the given options

Truth tables are used for analyzing \_\_\_\_\_\_.

- logical expressions
- ► arithmetic expressions
- ► both logical and arithmetic expressions
- ▶ none of the given options.

Which of the following array is the most suitable for storing a matrix structure?

- ► Single-dimensional array
- ► Two-dimensional array
- ► Three-dimensional array
- ► Four-dimensional array

How many bytes are occupied by declaring following array of characters? char str[] = "programming";

11 bytes for 11 characters of word programming and 1 for '\n'

When we do dynamic memory allocation in the constructor of a class, then it is necessary to provide a destructor.

The prototype of friend functions must be written \_\_\_\_\_ the class and its definition must be written \_\_\_\_\_

- $\blacktriangleright$  inside, inside the class
- ► inside, outside the class
- outside, inside the class
- ► outside, outside the class

Copy constructor becomes necessary while dealing with \_\_\_\_\_allocation in the class.

- ► Dynamic memory
- ► Static memory
- ► Both Dynamic and Static memory
- ► None of the given options

Dealing with structures and functions passing by reference is the most economical method

TrueFalse

1st...what is the function of flush commond?

1): when we specify the buffer size, normally the operating system or compiler does this for us. A typical size of buffer is 512 bytes. When the information is of 512 byte size, output will take place. But in the program, we may want at some point that whatever is in the buffer, show them. For that purpose the normal mechanism is flush. Flush the stream. The flush command forces the data from the buffer to go to its destination which is normally a screen or file and make the buffer empty. Lec 34

2nd...what are the types of tamplates? a template is a sketch to draw some shape or figure. There are two different types of templates in C++ language i.e.' function templates and class templates. Lec 41

The declarator of Plus (+) member operator function is

► Class-Name operator + (Class-Name rhs)

- ► operator Class-Name + ()
- ► operator Class-Name + ( rhs)
- ► Class-Name operator + ()

12 & 8 = (1000) 2 =\_\_\_\_\_. & is used to AND two numbers bit-wise

Select correct option:

Is ka answer 8 hy, see handouts page number 246.

Truth table for &

Bit1	Bit2	Bit1 & Bit2
1	1	1
1	0	0
0	1	0
0	0	0

Therefore, when we apply the conditions, we get

 $12 = 1 \ 1 \ 1 \ 0$  (binary conversion of 12) 8 = 1 \ 0 \ 0 \ 0 (binary conversion of 8)

 $1\ 0\ 0\ 0$ , which is equals to 8

The reserved words public and private comes under the category

Which of the following operators can not be overloaded?

1) :new

2) :delete

3) :+=

4) :sizeof

The reserved words public and private comes under the category

1) :structures

2) :strings

3) :accessibility modifiers

4) :types of functions

## Question No: 10 (Marks: 1) - Please choose one

What is the sequence of event(s) when allocating memory using new operator?

- Only block of memory is allocated for objects
- ► Only constructor is called for objects
- ► Memory is allocated first before calling constructor
- Constructor is called first before allocating memory

## Question No: 11 (Marks: 1) - Please choose one

What is the sequence of event(s) when deallocating memory using delete operator?

- Only block of memory is deallocated for objects
- Only destructor is called for objects
- ► Memory is deallocated first before calling destructor
- ► Destructor is called first before deallocating memory

## Question No: 12 (Marks: 1) - Please choose one

new and delete operators cannot be overloaded as member functions.

- ► True
- ► False

## Question No: 13 (Marks: 1) - Please choose one

The operator function of << and >> operators are always the member function of a class.

- ► True
- ► False

## Question No: 14 (Marks: 1) - Please choose one

A template function must have at least ----- generic data type

- ► Zero
- ► One
- ► Two
- ► Three

## Question No: 15 (Marks: 1) - Please choose one

If we do not mention any *return\_value\_type* with a function, it will return an \_\_\_\_\_ value.

int
void
double
float

## Question No: 16 (Marks: 1) - Please choose one

Suppose a program contains an array declared as **int arr[100]**; what will be the size of array?

▶ 0
▶ 99
▶ 100
▶ 101

## Question No: 17 (Marks: 1) - Please choose one

The name of an array represents address of first location of array element.

TrueFalse

## Question No: 18 (Marks: 1) - Please choose one

Reusing the variables in program helps to save the memory

▶ True▶ False

## Question No: 19 (Marks: 1) - Please choose one

Which of the following option is true about new operator to dynamically allocate memory to an object?

- ► The new operator determines the size of an object
- ► Allocates memory to object and returns pointer of valid type
- Creates an object and calls the constructor to initialize the object
- ► All of the given options

#### Question No: 20 (Marks: 1) - Please choose one

new and delete are \_\_\_\_\_ whereas malloc and free are \_\_\_\_\_.

- ► Functions, operators
- ► Classes, operators
- ► Operators, functions
- ► Operators, classes

#### Question No: 21 (Marks: 1) - Please choose one

Like member functions, \_\_\_\_\_ can also access the private data members of a class.

- ► Non-member functions
- Friend functions
- ► Any function outside class
- ► None of the given options

#### Question No: 22 (Marks: 1) - Please choose one

Which of the following statement is best regarding declaration of friend function?

- ► Friend function must be declared after public keyword.
- ► Friend function must be declared after private keyword.
- ▶ Friend function must be declared at the top within class definition.
- It can be declared anywhere in class as these are not affected by the public and private keywords.

#### Question No: 23 (Marks: 1) - Please choose one

The operator function overloaded for an Assignment operator (=) must be

- ► Non-member function of class
- ► Member function of class
- ► Friend function of class
- ► None of the given options

#### Question No: 24 (Marks: 1) - Please choose one

For non-member operator function, object on left side of the operator may be

- Object of operator class
- Object of different class
- ▶ Built-in data type
- ► All of the given options

#### Question No: 25 (Marks: 1) - Please choose one

The operator function will be implemented as \_\_\_\_\_, if obj1 drive the - operator whereas obj2 is passed as arguments to - operator in the statement given below. obj3 = obj1 - obj2;

- Member function
- ► Non-member function
- ► Friend function
- ► None of the given options

#### Question No: 26 (Marks: 1) - Please choose one

Which one of the following is the declaration of overloaded pre-increment operator implemented as member function?

- Class-name operator +();
- Class-name operator +(int);
- Class-name operator ++();
- Class-name operator ++(int);

#### Question No: 27 (Marks: 1) - Please choose one

The static data members of a class are initialized \_\_\_\_\_

- ► at file scope
- ▶ within class definition
- ► within member function
- ▶ within main function

## Question No: 28 (Marks: 1) - Please choose one

Class is a user defined\_\_\_\_\_

- ► data type
- ▶ memory referee
- ► value
- ▶ none of the given options.

#### http://vustudents.ning.com

**Question No: 29** (Marks: 1) - Please choose one We can also define a user-defines manipulators.

- ► True
- ► False

Question No: 30 (Marks: 1) - Please choose one Automatic variable are created on \_\_\_\_\_.

- Heap
  Free store
  static storage
- stack

Question No: 3 (Marks: 1) - Please choose one

A pointer variable can be,

- Decremented only
- ► Incremented only
- ► Multiplied only
- ▶ Both 1 and 2

Question No: 4 (Marks: 1) - Please choose one

setprecision is a parameter less manipulator.

► True

► False Question No: 5 (Marks: 1) - Please choose one

We can change a Unary operator to Binary operator through operator overloading.

What is the functionality of the following statement?

```
String str[5] = {String("Programming"), String("CS201")};
```

► Default constructor will call for all objects of array

Parameterized constructor will call for all objects of array

▶ Parameterized constructor will call for first 2 objects and default constructor for remaining objects

► Default constructor will call for first 3 objects and Parameterized constructor for remaining objects

There is an array of characters having name 'course' that has to be initialized by string 'programming' which of the following is the correct way to do this,

```
i. course[] = {'p', 'r', 'o', 'g', 'r', 'a', 'm', 'm', 'i', 'n', 'g'};
ii.course[] = 'programming';
iii. course[12] = "programming";
iv. course = "programming";
```

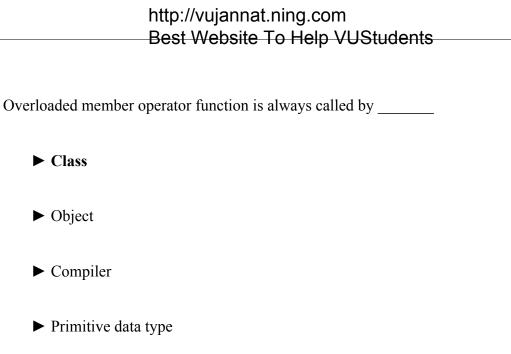

Choose the correct options.

► (i) and (ii) only

► (i) and (iv) only

► (i) and (iii) only

► (ii) and (iii) only

Consider the following code segment

class M {
 friend int operator!(const M &);

};

!s

## // code of line implies that operator!(s)

Let assume if s is an object of the class then function is implemented as \_\_\_\_\_

Non-member function

► Binary operator function

► None of the given options

None of the given options

Copy constructor becomes necessary while dealing with \_\_\_\_\_allocation in the class.

## ► Dynamic memory

- ► Static memory
- ► Both Dynamic and Static memory
- ► None of the given options
- 1) C/C++ string constant is enclosed in http://vustudents.ning.com

Small braces

Curly braces

## Double quote

Single quote

2) Unary operator takes argument

Zero

One

Two

Three

3) When define array of objects

Constructor will call

Destructor will call

The size of int data type is

- ► 1 bytes
- ► 2 bytes
- ► 3 bytes
- ► 4 bytes

In Flow chart process is represented by

► Rectangle

- Arrow symbol
- ► Oval
- ► Circle

If the break statement is missed in switch statement then,

- ► The compiler will give error
- ► This may cause a logical error
- ► No effect on program
- Program stops its execution

When we are using const keyword with a variable x then initializing it at the time of declaration is,

- ► Must
- Optional
- ► Not necessary
- ► A syntax error

Which of the following is the correct way to assign an integer value 5 to element of a matrix say 'm' at second row and third column?

- $\blacktriangleright m[2][3] = 5;$
- m[3][2] = 5;
   m[1][2] = 5;
- m[1][2] = 5';m[2][3] = 5';

How many total elements must be in two-dimensional array of 3 rows and 2 columns?

- ▶ 4
- ▶ 5
- ▶ 6
- ▶ 7

Which of the following is the correct statement for the following declaration? const int \*ptr.

▶ ptr is a constant pointer

ptr is constant integer pointer ►

▶ ptr is a constant pointer to int

ptr is a pointer to const int  $\blacktriangleright$ 

Consider the following code segment. What will be the output of this code segment? int arr[6] = {2, 3, 7, 4, 5, 6} ; int \*ptr1 =&arr[1] ; int \*ptr2 = &arr[4] ; cout << (ptr2-ptr1) ; ▶ 3 ▶ 9 ▶ 12 ▶ 2

What will be the correct syntax to assign an array named arr of 5 elements to a pointer ptr?

\*ptr = arr ;
 ptr = arr ;
 \*ptr = arr[5] ;
 ptr = arr[5] ;

The variables having a name, type and size are just like empty boxes.

► False True ►

What's wrong with this for loop?

for (int  $k = 2, k \le 12, k++$ )

- ► the increment should always be ++k
- ► the variable must always be the letter i when using a for loop
- ▶ there should be a semicolon at the end of the statement
- ► the commas should be semicolons

Most efficient method of dealing with structure variables is to define the structure globally ► True

False

Syntax of union is identical to \_\_\_\_\_

- Structure
- ► Class
- ► Function
- ► None of the given options

Like member functions, \_\_\_\_\_ can also access the private data members of a class.

Non-member functions

Friend functions

Any function outside class

None of the given options

Function created with in function called?

nested overloaded grouped none of them
