CS201 Mid term paper 23 June 2018 2:30 PM By Kashaf Mushtaq

Today's Paper was soooooo easy.

MCQs were very easy also subjective was just like chewing bubble.

MCQs were 18

3 Marks Q = 2

5 Marks Q = 3

Q.1 Write the code of the following arrays; Marks(3)

1. float array length 8

2. float array length 8 to pointer

Q.2 Find the error in the following. Marks(3)

```
{  
int number;  
  
if(number/2==0)  
  
cout<<"The number is even:";  
  
else()  
  
cout<<"The number is odd:";  
  
getch();
```

```
}
```

Q.3 Write a program in C++ to calculate the Average Price of the book. Marks(5)

calculations given the. Inputs ly kr display krwana tha.

Q.4 Give the output of the following

```
{
```

```
int lt=1 nt=0 s;
```

```
int number=8;
```

```
if(nt<number/2)
```

```
{
```

```
cout<<"\t";
```

```
s=nt+lt
```

```
nt=lt
```

```
s=lt
```

```
}
```

Q.5 Write a code to find the product.

```
product= number *2^5
```

input ly kr output show krwani the.

current papr cs201 file 1 23 june spring 2018

Today cs201 paper

- 1.General syntax of switch statement
2. Applications softwares with examples

3. Output of program having arrays

4. To write a program arrays of 10 elements. Sorting. Find minimum and maximum number

For mcqs just study past papers and read handouts once

REPLY BY BY_RANA_ABUBAKAR_KHAN ON DECEMBER 9, 2017 AT 12:50PM

Today cs201 paper.z

How many dimensions in n dimension array.

Loop is also called..repetitive...Structure

access array in random which approach is best

=< ,<= ,>= are called ..relational... operators

#include is called.. preprocessor directive..

Not example of int data ..-4.0..

All element of data must be of same type..

Analysis is the .. first..step

Array are ..call by reference...

Move to next iteration of loop .. continue statement...is used

A hierarchy of classes which are used to deal with console and disk file.. iOS..

.. functions..are good for code reusability.

Bitwise and work same like.. logical.. and but on bits

SUBJECTIVE.

Write 2d array with five rows and six column and also write pointer to above array.?

Why we comment liberally in programs does they affect on performance...?

A do while loop executive ho many times at least and a while loop?

Then 2 program likhi thy inline output likhi thy ak array main say tha aur doses open file...

todat my cs201 paper

mcqs mostly from moaaz collection (18 marks)

do while loop pe program likhna tha(5 marks)

& | operators ke bre me likhna tha(3 marks)

program me highlight lines ko explain krna tha (5 marks)

aik or program e likhna tha wo yad ni(5marks)

program ka out put btana tha(3 marks)

CS201 MIDTERM PAPER SHARED BY STUDENT

ON JUNE 4, 2017 AT 11:48AM

5 marks

Write a program using switch statement that should prompt the user to enter radius of circle.

After getting input from user, it should display the following menu to user.

1. Press 'A' or 'a' to calculate area
2. Press 'C' or 'c' to calculate circumference

When user enters correct choice then corresponding task should be executed.

If user presses key other than above option then message "Option is not available" should be displayed on output screen.

Formula for:

Area of Circle: $3.14 \times \text{radius} \times \text{radius}$

Circumference of Circle: $2 \times 3.14 \times \text{radius}$

Another Paper:

Q1: `int*myarray[]={ "amir" }` how many memory bytes??

Q2: write the functionality of :

a- `int*constIntptr=&x;`

b- `constint *intptr=&x;`

Q3: name any three system software and explain how system software controls hardware.?

Q4- What is call by reference & call by value?

Q5- Write a structure program with members base, hypotenuse, and perpendicular?

CS201 MIDTERM PAPER SHARED BY STUDENT

REPLY BY MARRI ON JUNE 11, 2017 AT 3:07PM

Asalamualikum guys my CS201 paper:

subjective paper:

Q19: marks 3

```
int num[3][2]={12,51,34,54,14,55};
```

```
for(int j =0; j<3; j++)
```

```
cout>(*num+j)+1endl;
```

Q20: marks 3

```
a=3;
```

```
b=a++;
```

```
cout<<"a"<<"a";
```

```
cout<<"b"<<"b";
```

Q21: marks 5

write a code to read a string not greater than 20 character from keyboard, store it in an array and display it on screen.

Q22: marks 5

pdfelement

calculate the area of circle. you have to declare two variables for this, one is area and other is radius. take the value of radius from user.

hint: Area of circle= $3.14 * \text{radius} * \text{radius}$

Q23: marks 5

write a program that prompts the user to enter a string & reverse the string using pointer & display the string in reverse order on the output screen. program must include the complete line include spaces.

best of luck guys.....

CS201 MID TURM EXAM 17 DEC 2016 BY ABDUL SHAKOOR

Subjective:

Q-Write down the general syntax of switch statement.

Q-Write a code segment that displays the diagonal element of a matrix of NxN.

where N can be any number and represents demention of matrix

Q-Mention any two affects in a programme who can occur as a result of an overflow condition.

CS201 MIDTERM PAPER SHARED BY STUDENT

18 DECEMBER 2016 TIME 2:30 OBJECTIVE PAPER

1. You can use a ___GOTO___ statement to transfer control elsewhere out of the nested structure.
- 2 Overflow condition occurs when we try to assign a value to a variable which is _____.
3. Reusing the _____ in program helps to save the memory.
- 4 When an array is passed to a function, by default it will be passed by_____.
5. There are mainly ----- types of software.
6. In 2D array, the technique used to access the array elements is called _____.
7. Characters are represented inside the computers in terms of code number which is called _____ encoding scheme.
8. _____ is used to check for the end of file when a file is being read.

9. When the logical operator AND (&&) combines two expressions exp1 and exp2 then the result will be true only _____
10. The left-shift operator can be used to pack two character values into a _____ integer variable.

.....
Subjective question

What will be the output of the given program code ?

```
#include
```

```
main()
{
```

```
int num[3][2] = {12, 51, 34, 54, 14, 55};
```

```
for(int j=0; j<3; j++) cout<< (*(num + j) + 1)/p<<endl;
```
