

Questions:

1. **How can you minimize, restore, and close Internet Explorer using buttons?**

Answer: The minimize button is used to minimize the window, the restore button is used to restore it down, and the close button is used to close Internet Explorer.

2. **What is the purpose of the toolbar, and how is it related to the menu bar?**

Answer: The toolbar, located next to the menu bar, serves as a shortcut for menu bar sub-options, commonly referred to as the standard toolbar. It contains buttons for essential tasks. By clicking icons on the toolbar, users can perform important functions. The toolbar is essentially a quicker way to access features present in the menu bar.

3. **Explain the role of protocols in data transfer on the internet. Provide examples of different protocols.**

Answer: Protocols are rules governing data transfer between computers. Examples include HTTP for transferring web pages, HTTPS for secure communication, and FTP for accessing files from servers. TCP/IP is also mentioned. Each protocol serves a specific purpose, such as HTTP for web page transfer with hyperlinks, HTTPS for secure communication, and FTP for file access.

4. **How can you change the home page in a web browser, and what are the methods to stop a web page from downloading?**

Answer: To change the home page, one can go to Tools < Internet Options < General < Address. To stop a web page from downloading, options include clicking on View < Stop or pressing the Stop button. This is useful when a webpage takes too long to load or when an incorrect link is clicked.
